Document Body

Carl, Matt;

Attached are two files: a transmittal letter and a Technical Memorandum as an attachment to the letter. You will be getting hard copies of these in a package of Cannery and ASPA monitoring reports that are going in the mail in a day or so. However, we wanted to make sure this did not get lost in the pile.

The canneries asked that we evaluate the possibility of opening more ports on the diffuser to reduce head loss under high flows. The attachment addresses this planned action and documents that there are no adverse effects, either environmentally or operationally.

Unless USEPA or ASEPA have concerns or objections, the canneries will plan on opening the two blocked ports later this year when they do an outfall inspection and routine maintenance.

Please give us a call or respond by email if you have questions or concerns. Thanks for your attention to this matter,

Regards

Steve Costa
Karen Glatzel
